## Features:

- 2000 mAh - High Capacity
- Lightweight and Compact
- Team Magic Quality

## Lightweight

The Black Magic 2000mah AA lightweight glow starter is another addition to the new lineup of glow starters being brought to you by Team Magic. This particular glow starter is extremely compact and lightweight. The AA size rechargeable battery means this glow starter is at least one third slimmer than any other glow starter available.

## High Capacity

The battery in this glow starter is of 2000mah capacity. This means you will not be recharging on race day. There is nothing more frustrating than trying to diagnose starting issues with your nitro RC engine at the start of that important A-Main, only to find your glow starter has gone flat. This can mean the difference between winning and losing. The last thing we want our customers to worry about is a flat glow starter so we have updated our product with the highest battery capacity we could.

## Ideal for Travel

If you travel for your RC passion, the lightweight design of the Black Magic glow starter will be a natural choice. Many things in our sport are quite heavy making weight saving a constant pursuit. Now that pursuit can be realized with this lightweight glow starter.

## Unique look

Like the other glow starters in the new range of Black Magic glow starters, the 2000mah lightweight glow starter has a look that is unmistakable. How many times have you had someone else pick up your glow starter because it looked exactly like theirs? From the comfortable finger grips to the distinctive orange spring, you will be able to spot your Black Magic glow starter in the pack.
